

PATENT

Name: Unified Medical Record Cloud Network

File number #: 16/235,857

The Unified Medical Record (UMR) Cloud Network allows the utilization of FHIR resources of a patient and enable an app store approach specifically for FHIR.

This enables the patient to have a web portal with apps containing business logic and provide individual solutions.

The portal aims at eliminating medical documentation, clinical reports, medication history reports, medical consultation history etc., that the patient has to maintain over his/her lifespan.

The FHIR RESTful APIs shall enable the UMR cloud network and the hosted FHIR apps to process and provide solutions that they intend to address.
